How many equipments can be connected to the eWON using Modbus RTU

- Standardly every "RS485 driver" can drive 32 Slave equipments.
- But if the Modbus Slave equipments have a high input impedance, then you can drive up to 255 equipments.

For example, if your slave equipments are built on the same RS-485 chip than the eWON, then you can build a network with up to 255 equipments.

Pay attention that the network must be terminated and polarized to achieve such performance.
