Disable the transparent Ethernet to serial gateway

By default eWON listens on standard PLC protocol ports in order to act as transparent Ethernet to serial gateway.

For example eWON listens on TCP port 502 in order to act as Modbus Ethernet to Modbus RTU gateway, or on port TCP 102 to act as ISOTCP to MPI gateway, etc.

If for some reason you do not want that eWON listens on the ports used for transparent gateway feature, then you can close the ports by specifying port 0 for the corresponding protocol.

This can be done using menu: IO Server Config / Global Config

- Important -

An eWON reboot is required to apply the port changes.
