

## Connect an Omron on the peripheral port

To connect an Omron by Peripheral port you must use a CS1-CN118 or CS1W-CN226 or CS1W-CN626 cable.

To use peripheral port you must place the dip switch 4 of the PLC to ON position. Then the PLC can take the port configuration value of your consol.

See also this link for more details about DIP switch: [OMRON Dip\\_switch.pdf](#)

By default the peripheral port setup are the same than Port Host Link normally just by switching the cable it should work, if you don't change the default Port Host link parameter. If it's the case use the same parameters.
