

Select an appropriate IP address for your machines LAN network

You are developing a viewON application and you want that this project opens automatically when the customer reaches the eWON (using only the IP address).

For this, you just need to set the value "viewON synopsis" in the User defined home page field of the Identification page of eWON.

Now, when your Customer will access to the eWON with simply its IP address (e.g. <http://10.0.0.53>), he will see the viewON application directly.

- Note -

If you want that your Customer have no access to the Configuration Website of the eWON, don't forget to create a specific User account for him without the "Change Configuration" right.
