# 1 Preface

## 1.1 About This Document

This document presents the features of the Ewon Cosy 131 and explains briefly the steps to take to get a functional Cosy 131.

For additional related documentation and file downloads, please visit [www.ewon.biz/support](http://www.ewon.biz/support).

## 1.2 Document history

Version	Date	Description
1.0	2018-05-03	First release
1.1	2018-08-29	Added: NTP Client / Server Added: Anybus Bolt Configuration Added: Easy APN

## 1.4 Trademark Information

Ewon® is a registered trademark of HMS Industrial Networks SA. All other trademarks mentioned in this document are the property of their respective holders.

## 2 Requirements

### 2.1 Hardware

This guide presents the features of the Cosy 131 which is used for remote access your devices.

### 2.2 Software

The Cosy 131 is configured through its web interface which is accessible with any modern web browser. The recommended platforms are:

- Firefox 15 and higher.
- Chrome 16 and higher.
- Safari 11 and higher.
- Edge 13 and higher.

#### **eBuddy**

The eBuddy application assists with initial IP address configuration for the Ewon Cosy 131 as well as maintenance tasks such as upgrading firmware, creating/restoring backups...

[Download eBuddy.](#)

#### **eCatcher**

The companion tool eCatcher is required if you wish to connect the Ewon Cosy 131 to the Talk2M infrastructure. It also allows to create and set up a Talk2M account.

To install eCatcher, you will need the administrator rights on the computer.

[Download eCatcher.](#)

## 3 Access to the Ewon Cosy 131

In this section, we will explain the following actions:

1. Assign an IP address to your Ewon Cosy 131, different than the default IP address.
2. Register your Ewon Cosy 131 to a Talk2M account.
3. Access the web interface of the Ewon Cosy 131 to begin its configuration.

### 3.1 Assign an IP Address

You can establish the first communication with the Ewon Cosy 131 using the eBuddy application (check [Software, p. 4](#) for more details about eBuddy).

By default, the IP address of the Ewon Cosy 131 is set to 10.0.0.53 which in some circumstances might need to be changed.

To change the IP address of the Ewon Cosy 131, proceed as follows:

1. Connect the port labeled as **LAN (port #1)** of the Ewon Cosy 131.

This can be done either point-to-point (computer <> Ewon Cosy 131) or through a network if the default IP of the Cosy 131 will not conflict with another connected device.

2. Start the eBuddy application.

The application scans through the Ethernet adapter network, identifies the connected Ewon devices and display their IP address, subnet mask and serial number.

eBuddy also allows the modification of the default IP address without necessarily being in the same network range.

3. Optional: Highlight the row representing the device to be modified.
4. Click on the button **Set IP** from the top bar menu.
5. Indicate the serial number of the Ewon Cosy 131 that you want to modify.
  - ▶ If you went through step #3, the serial number is provided automatically.
6. Click **Next**.
7. Enter the **<new IP address>** and its **<subnet mask>**.
  - By clicking **Next**, eBuddy sends the commands to the Ewon Cosy 131 to change its IP address and to reboot.
8. Once the reboot completes, you can access the Ewon Cosy 131 using its new LAN IP address.

### 3.2 Talk2M Account Configuration

Talk2M offers a secured and easy way to set up a remote connection over the Internet.

To allow the remote access, you need to link the Ewon Cosy 131 to the Talk2M infrastructure, more specifically to a Talk2M account.

To configure the Talk2M account:

1. Launch eCatcher and log into your Talk2M account.
  - ▶ To download and install eCatcher, please refer to [eCatcher, p. 4](#)
  - ▶ In case you do not have a Talk2M account yet, click on **Create a Free+ Account** and follow the prompts on the screen. Once you've created the Talk2M account, an email will be sent with the activation link and instructions.
2. Click on the icon **+Add** to add the Ewon Cosy 131 to your Talk2M account.
3. Follow the screen prompts.
  - ▶ Be aware that some options require the full telephone number, county code included
4. Copy the **<Activation Key>** to the clipboard in the last step of the wizard. You will need it later during the Talk2M wizard of the Ewon Cosy 131 configuration.

The Ewon Cosy 131 is now successfully listed in the **<Ewon list>** of eCatcher.

### 3.3 Access the Web Configuration Interface

The configuration of the Ewon Cosy 131 can be done using its embedded web interface.

As your computer is connected to a LAN port of the Ewon Cosy 131, open an Internet browser and enter the LAN IP address of the Cosy 131 in to the address field.

If the computer is not in the same network address range as the Ewon Cosy 131, its web pages can be reached using the *EZ DHCP* feature of the eBuddy utility. For more information, refer to eBuddy from the [Related Documents, p. 3](#)

Before beginning the configuration of the Ewon Cosy 131, authentication is required. The default login and password are both **adm**.

For security reasons, you are required to change the default password. The password can be changed through the *System Wizard* described below.

At first boot or after a reset level 2 of the Ewon Cosy 131, and after successfully logging in, a prompt will appear to set the interface language.

After you have selected the interface language, the Ewon Cosy 131 will propose a configuration wizard which leads to a quick configuration of the system and communication settings. On later connections, the configuration wizard is accessible through the *Wizards* button in the upper right corner.

## 4 Quick Launch Wizard

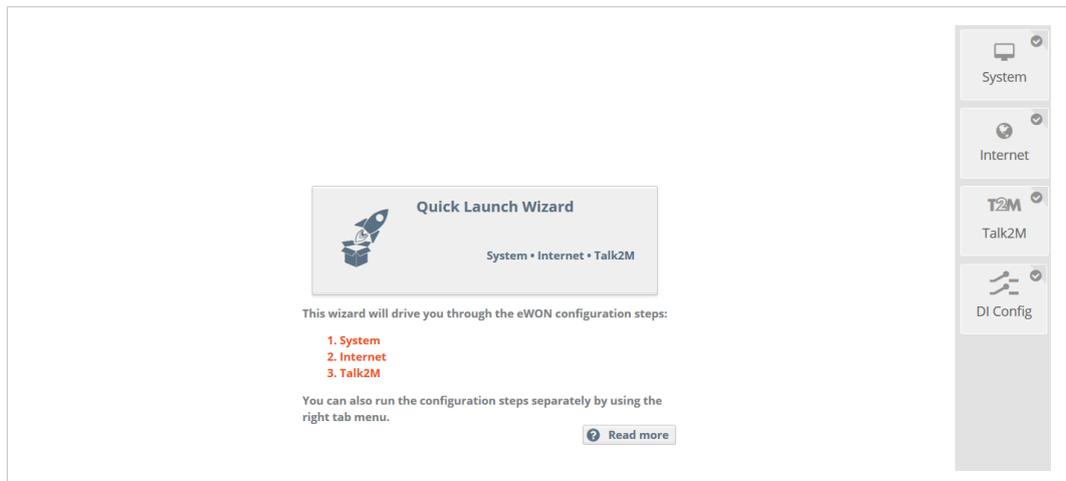

Fig. 1 Quick Launch Wizard Button

The Quick launch wizard will guide you through the different setup wizards to configure your Ewon Cosy 131 for remote connection through Talk2M:

- The *System Wizard* configures basic system settings such as the date & time and the default username & password.
- The *Internet Wizard* configures the WAN communication settings.
- The *Talk2M Wizard* establish a VPN between the Ewon Cosy 131 and the Talk2M infrastructure.

### 4.1 System Wizard

The *System Wizard* configures basic system settings.

On the first screen of the *System Wizard*, enter the **Ewon name**.

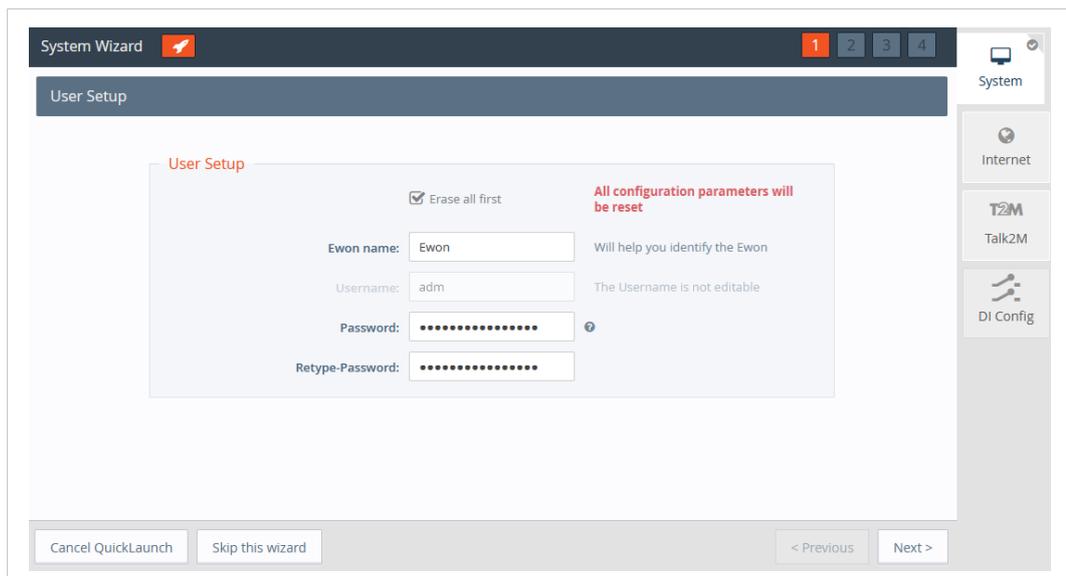

Fig. 2 System Wizard User Setup

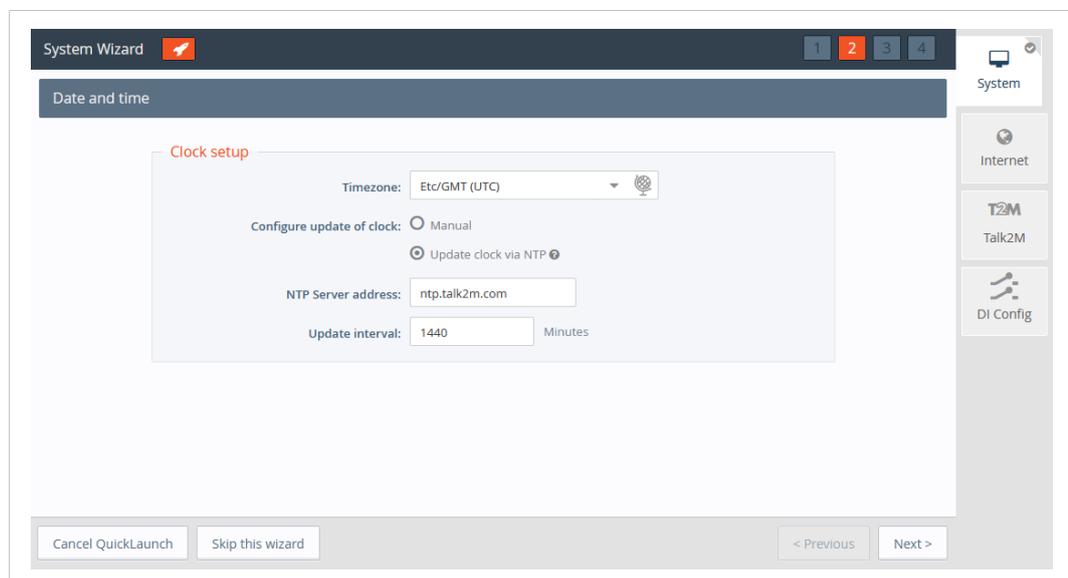

For security reasons, you are required to change the default password for the adm user.

On the second screen of the *System Wizard*:

- Configure the accurate **<date and time>** settings. For Talk2M communication, it is imperative that the date of the Ewon Cosy 131 is correct.
- Configure the **<Timezone>** settings:
  - ▶ click either on the arrow or the map icon.
- Set the URL of the remote **<NTP server>**. By default, **ntp.talk2m.com** is set. This field is shown only if **Update clock via NTP** is selected.
- The **<time interval>** used to update the clock. This field is shown only if **Update clock via NTP** is selected.

Click **Next** to proceed to the next screen.

**Fig. 3** *System Wizard* Date and Time

The third screen of the *System Wizard* shows the standard attribution of the four ports Ethernet switch.

The ports #1, #2, #3, will be dedicated to LAN — *localaccess* — network and port #4 will be dedicated to WAN — *Internet access* — network.

The attribution of a port can be easily recognized by its LED color:

- Orange for a WAN port.
- Green for a LAN port.

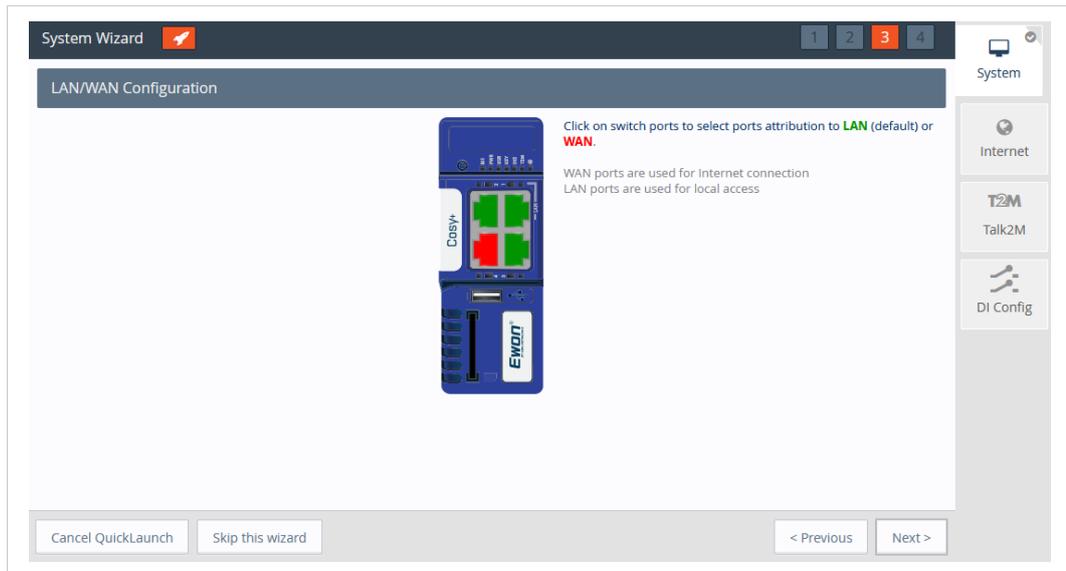

Fig. 4 System Wizard LAN/WAN Configuration

Click **Next** to finish the *System Wizard* settings.

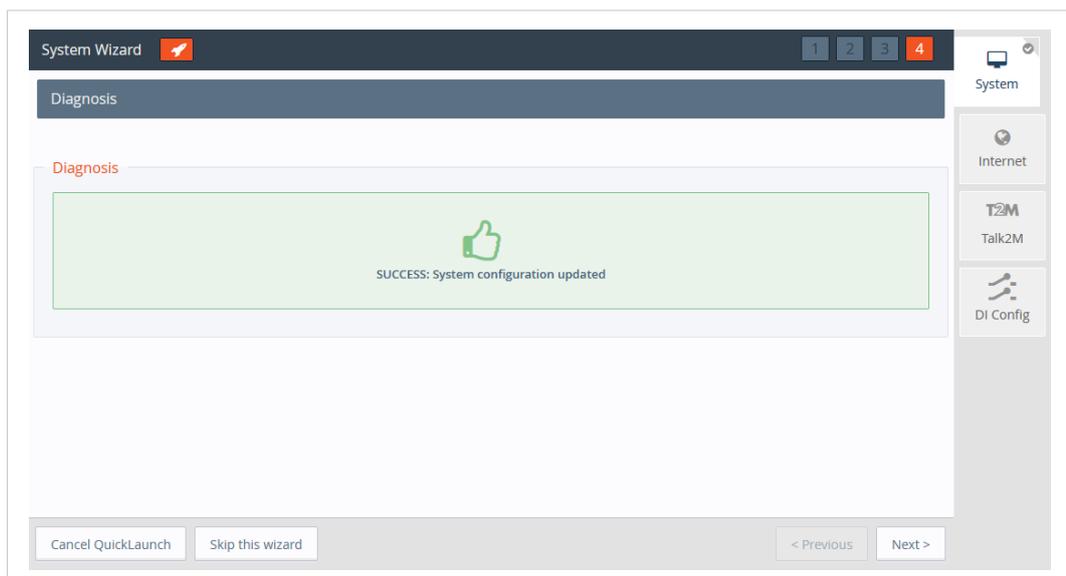

Fig. 5 System Wizard Diagnosis

## 4.2 Internet Wizard

The *Internet Wizard* configures the Internet settings for the Ewon Cosy 131. The **<Interface>** field allows the selection of the WAN interface used for the Internet connection:

- **Ethernet WAN connection**
- **Cellular Modem**
- **Wi-Fi Connection**

## 4.2.1 Ethernet WAN Configuration

1. Select the Ethernet Internet connection.

Fig. 6 *Internet Wizard Connection Setup*

2. Click **Next** to continue the WAN interface configuration.
3. Select the appropriate method how the Ewon Cosy 131 is supposed to receive its IP address, according to the LAN network configuration: **Static**, **BootP** or **DHCP**.

Select **DHCP** from the dropdown to receive an IP automatically from the LAN network.

Fig. 7 *Internet Wizard Ethernet WAN Connection Setup*

4. Click **Next** to proceed to the next screen.

- The *Internet connection test* is enabled by default, it allows the Ewon Cosy 131 to verify the Internet connection.

Uncheck this option if this network uses a proxy server or if port 80 is closed for outbound connections.

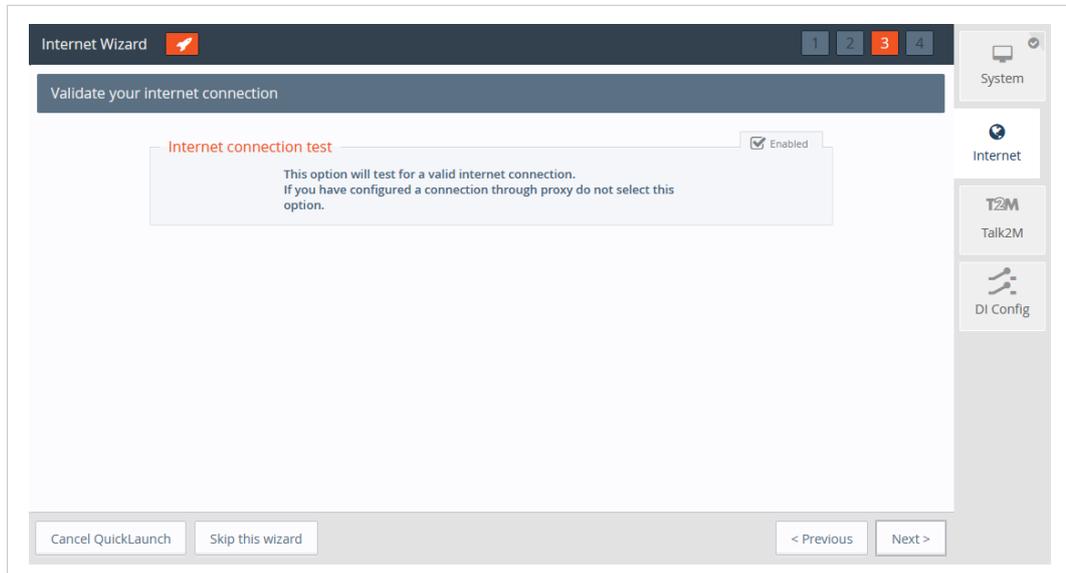

Fig. 8 **Internet Wizard Validation**

- Click **Next** to apply the configuration changes.
  - Once the wizard completes successfully, the Ewon Cosy 131 is connected to the primary WAN network.

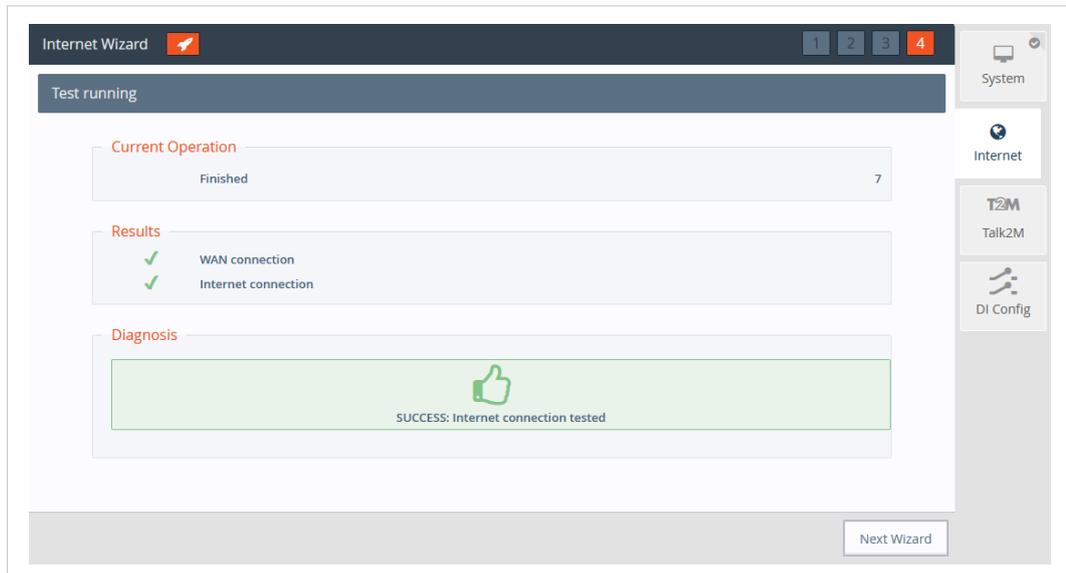

Fig. 9 **Internet Wizard Test**

## 4.2.2 Cellular Network Configuration

- Select **Modem Connection** if your Ewon Cosy 131 embeds a cellular modem.

2. Select the type of trigger: to keep the Cosy 131 connected to Internet permanently or select *Send SMS to activate* to activate the remote access only after receiving an SMS.
  - ▶ **Maintain connection:** the Ewon Cosy 131 is permanently connected to Internet.
  - ▶ **Send SMS to activate:** the Ewon Cosy 131 connects to the Internet only after you sent a “wake-up” sms.

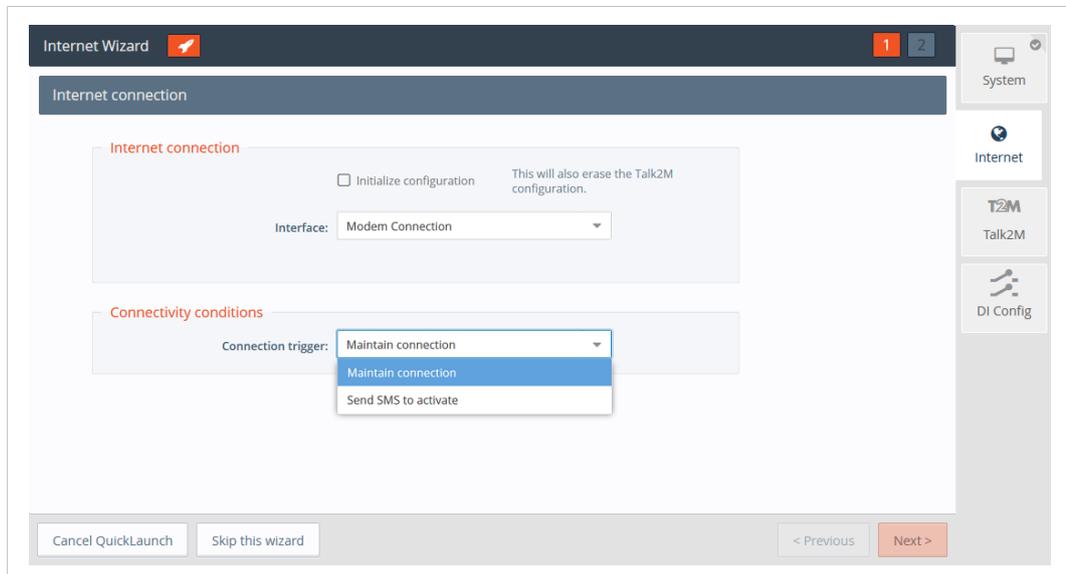

Fig. 10 **Internet Wizard Connection Setup**

3. Configure the settings of the SIM card:

- **<PIN code>**
- **<Country>** where the Ewon Cosy 131 will be located, the operator
- **<Operator>**
- **<APN list>**, the address of the operator.

The Ewon Cosy 131 will automatically propose an APN based on the value of the **<Country>** and **<Operator>** fields.

If the APN is not automatically proposed, you will need to set a **Custom APN** and type the desired APN.

Be aware that some operators have different APN for the same local area.

- If required, enter the APN **<Username>** and **<Password>**, otherwise leave this field empty.
- ▶ Double check with your operator to enter the correct information
- ▶ In case of specific connection settings such as network type or preferred provider; check the **<Show advanced options>** box.

The screenshot shows the 'Internet Wizard' application window. The title bar reads 'Internet Wizard' with a red arrow icon and step indicators 1, 2, 3, 4. The main content area is titled 'GSM modem' and contains a 'GSM modem connection (GPRS/EDGE/3G/4G)' section. This section has several input fields: 'SIM PIN' (masked with dots), 'Country' (dropdown menu set to 'Belgium'), 'Provider' (dropdown menu set to 'Proximus'), 'APN list' (dropdown menu set to 'internet.proximus.be'), 'Username' (text input), and 'Password' (text input). Each field has a corresponding instruction: 'Enter the SIM PIN code (4 digits). Leave empty if the SIM card does not require a PIN code.', 'The Access Point Name is specified by the GSM operator.', 'Username as defined by the GSM operator (some operators do not require a username)', and 'Password as defined by the operator.'. At the bottom of the wizard are buttons for 'Cancel QuickLaunch', 'Skip this wizard', '< Previous', and 'Next >'. On the right side of the window, there is a vertical sidebar with icons for 'System', 'Internet', 'T2M Talk2M', and 'DI Config'.

Fig. 11 Internet Wizard GSM Modem

4. Click **Next** to apply the configuration changes.
  - Once the wizard completes successfully, the Ewon Cosy 131 is connected to Internet through its cellular WAN network.

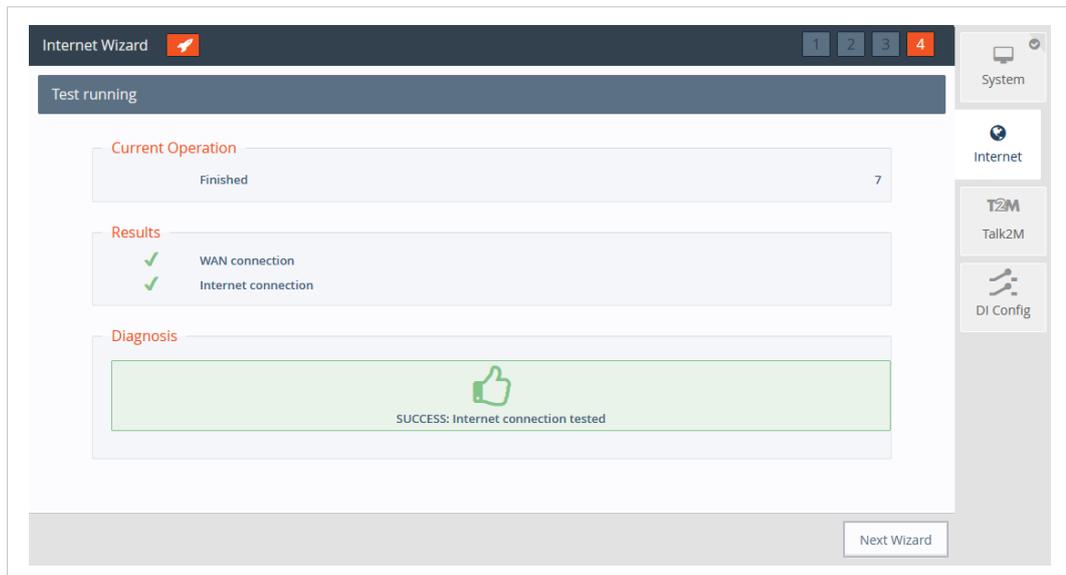

Fig. 12 Internet Wizard Test

### 4.2.3 Wi-Fi Network Configuration

1. Select the connectivity conditions accordingly, in this case : **WiFi INTERNET connection**.

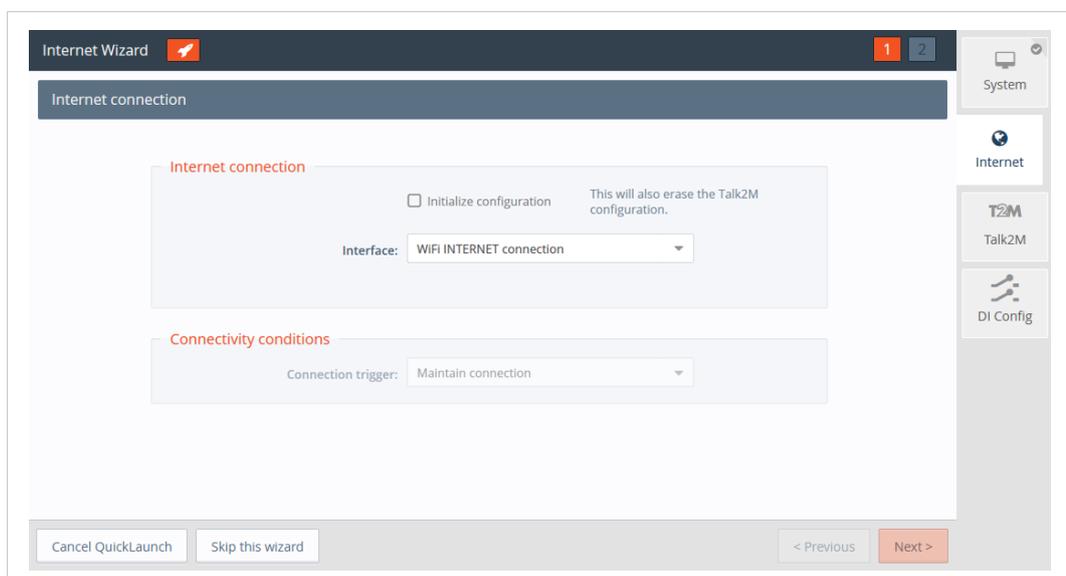

Fig. 13 Internet Wizard Connection Setup

2. Click **Next** to proceed to the next screen.
3. Provide all information related to Wi-Fi connection configuration: Select the Wi-Fi network to connect and enter the password.
4. Keep the *DHCP* default settings for the Wifi WAN Connection and DNS, unless otherwise required by the local IT department.
5. In case of specific proxy connection settings; check the *Connect to Talk2M through proxy* checkbox

Click **Next** to apply the configuration changes.

The screenshot shows the 'Internet Wizard' interface for 'WiFi WAN Connection'. At the top, there are four numbered steps: 1, 2 (highlighted in red), 3, and 4. The main content area is divided into three sections: 'WiFi setup', 'WiFi WAN connection', and 'DNS Setup'. In the 'WiFi setup' section, 'Network selection' is set to 'List', 'Mac Address' is '00:07:80:f0:07:d0', 'Network name' is 'eWONtraining', and 'Passphrase' is masked with dots. The 'WiFi WAN connection' section has a 'DHCP' dropdown menu and input fields for 'IP address' (10.121.120.101), 'Subnet mask' (255.255.255.0), and 'Default gateway' (10.121.120.254). The 'DNS Setup' section has a 'Via DHCP' checkbox that is checked. At the bottom, there are 'Cancel', '< Previous', and 'Next >' buttons. On the right side, there is a sidebar with icons for 'System', 'Internet', 'T2M', 'Talk2M', and 'DI Config'.

**Fig. 14** Internet Wizard Wifi Setup

Click **Next** to proceed to the next screen.

- The *Internet connection test* is enabled by default, it allows the Cosy 131 to verify the Internet connection. If this network uses a proxy server or if port 80 is closed for outbound connections, uncheck this option.

Click **Next** to apply the configuration changes.

The screenshot shows the 'Internet Wizard' interface for 'Validate your internet connection'. At the top, there are four numbered steps: 1, 2, 3 (highlighted in red), and 4. The main content area features a section titled 'Internet connection test' with a 'Via DHCP' checkbox that is checked. Below this, there is a text box that reads: 'This option will test for a valid internet connection. If you have configured a connection through proxy do not select this option.' At the bottom, there are 'Cancel', '< Previous', and 'Next >' buttons. On the right side, there is a sidebar with icons for 'System', 'Internet', 'T2M', 'Talk2M', and 'DI Config'.

**Fig. 15** Internet Wizard Wifi Validation

### 4.3 Talk2M Wizard

The *Talk2M Wizard*, configures the VPN connection between the Cosy 131 and your Talk2M account on the Talk2M server..

- On the first screen of the *Talk2M Wizard*, select *Register with Activation Key* option
- Paste the *Activation Key* .

Click *Next* to move forward to the next screen.

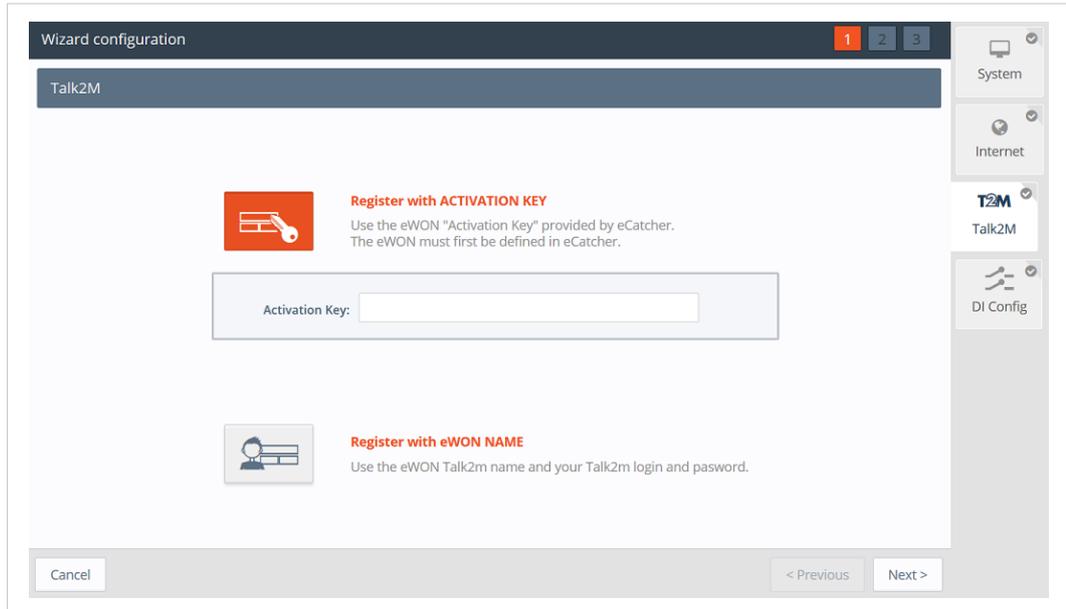

Fig. 16 Talk2M Wizard Activation Key

Alternately, it is possible to register with the eWON Name option:

- Click on *Register with eWON Name*
- Enter the Talk2M name of the Cosy 131, and a valid Talk2M account user credentials.

Click *Next* to move forward to the following screen.

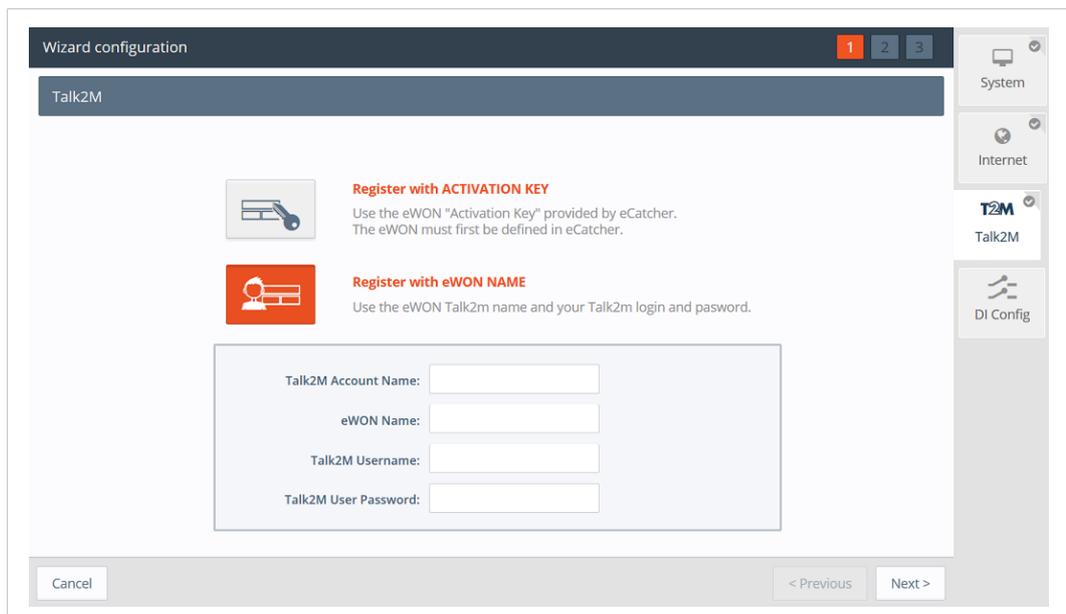

Fig. 17 Talk2M Wizard Registration Name

If the network used for Internet access apply a proxy server:

- Check the *Enable* checkbox in the *Connect via HTTP Proxy* settings
- Enter the appropriate information for the proxy server

Click *Next* to move forward to the next screen.

**Fig. 18** Talk2M Wizard Proxy Configuration

This Wizard connects to the Talk2M server and retrieve the VPN settings for the Cosy 131 linked to your account. The Wizard also check UDP and TCP connection to find the best suitable option for this eWON. If the wizard completes successfully, the Cosy 131 is now configured for Remote Access through Talk2M. If the wizard fails, the [Diagnostic and Setup, p. 27](#) section will give additional troubleshooting information.

**Fig. 19** Talk2M Wizard Validation

## 5 Home Section

The Summary page or home section, shows at a glance information about the health and status of the Cosy 131. Its current Internet connection and VPN connection status, date and time, and firmware versions are all displayed

### Internet Connection

<b>Fallback</b>	The status of the WAN fallback feature. For more information about the WAN fallback, check the <a href="#">Wan fallback, p. 25</a> .
<b>Internet Status</b>	This field appears only if the Internet connection of the Cosy 131 hasn't been configured.
<b>Connected since</b>	Elapsed time since the Cosy 131 is connected to the Internet.
<b>WAN IP Address</b>	IP address of the WAN connection.
<b>Connected interface</b>	WAN interface used to connect the Cosy 131 to the Internet.
<b>WiFi Status</b>	The SSID of the the Wi-Fi network the Cosy 131 is currently connected to. This field appears only if the Cosy 131 is equipped with a Wi-Fi interface.
<b>GSM Status</b>	The name of the cellular operator, the signal strength and the cellular technology used.
<b>GSM data consumption</b>	The cellular consumption of the Cosy 131 (upload & download).

### VPN Connection

<b>Status</b>	This field appears only if the VPN connection of the Cosy 131 hasn't been configured.
<b>Connected since</b>	The elapsed time since the Cosy 131 is connected to the VPN service. This field doesn't appear if the VPN connection hasn't been configured.
<b>VPN IP Address</b>	The IP address of the VPN connection. This field doesn't appear if the VPN connection hasn't been configured.

### System Information

<b>Current user</b>	The user currently used to browse the web interface.
<b>eWON Type</b>	The model of the device.
<b>Serial Number</b>	The serial number of the device.
<b>Firmware Version</b>	The current firmware version of the device.
<b>Current time</b>	The current date & time of the device.
<b>LAN IP/Mask</b>	The LAN IP address and subnet mask of the device. By default: 10.0.0.53/255.255.255.0
<b>Embedded modems</b>	The type of modem inserted in the Cosy 131: Wi-Fi or Cellular This field appears only if the model of the Cosy 131 is equipped with Wi-Fi or Cellular connection.

### Gateway Status

<b>USB</b>	Status of the USB connectivity. By default, it is activated. Possibility to change this status by clicking on it.
<b>NAT 1:1</b>	Status of the NAT 1:1 By default, it is deactivated. Possibility to change this status by clicking on it.

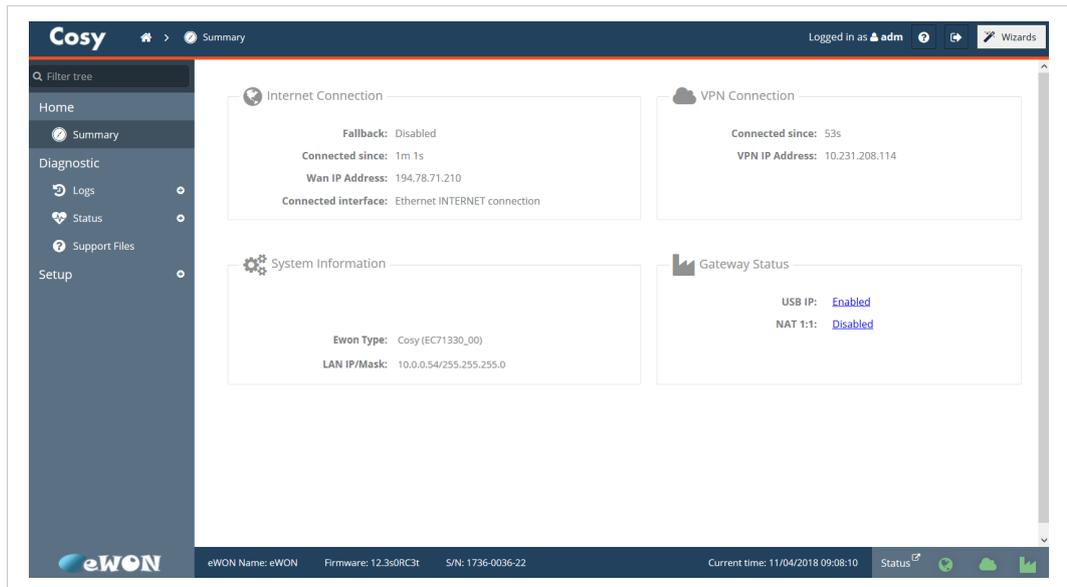

Fig. 20 Summary Page

## 6 Ready to establish the remote connection to your eWON

The Cosy 131 is now configured and available for remote access.

Start now eCatcher to connect your Cosy 131 remotely. Alternatively, you can also use *eCatcherMobile* or *M2Web*.

eCatcher Mobile:

It is the app version to be installed on your mobile devices running under Apple iOS or Google Android. It is used to initialize secure remote access and allows you to use mobile applications. For further information, refer to eCatcher Mobile from the [Related Documents, p. 3](#)

M2Web:

It allows the remote Web access to your eWONs. To realize the remote Web access, no special software is needed on the PC or on the tablet. For further information, refer to M2Web from the [Related Documents, p. 3](#)

## 7 DI Config Wizard

This option is not part of the *Quick Launch Wizard*, so it is only available by clicking on the *DI Config* wizard. Moreover, the DI physical connection need to be wired to be used as a function.

The digital inputs can be used to :

- Control the remote access using a *Key switch*
- Send out an alarm notification by email and/or SMS

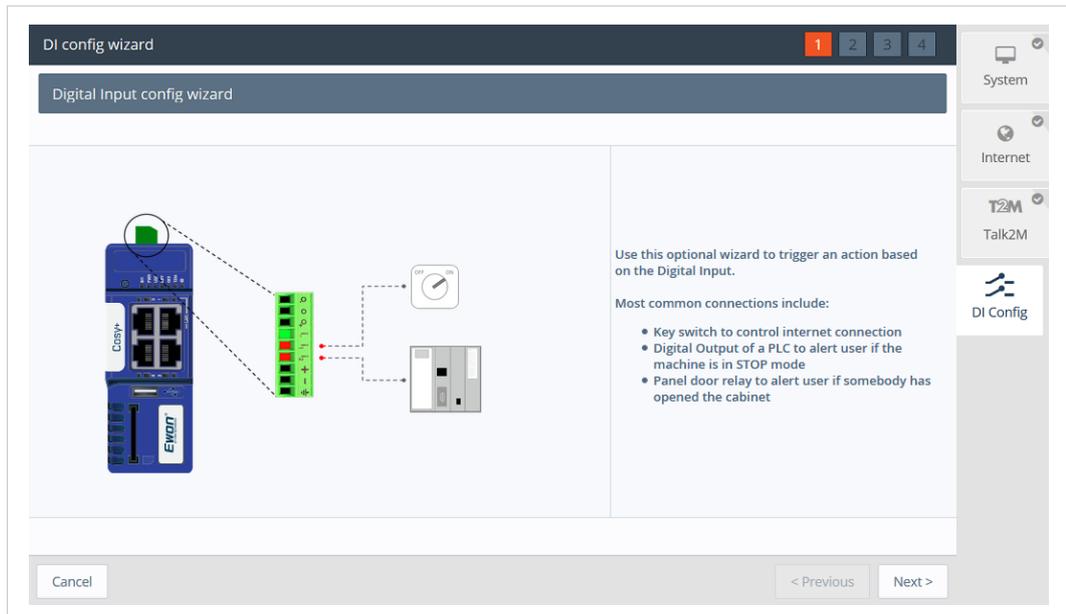

Fig. 21 DI Wizard

### 7.1 Remote Access Control

To enable the remote access control:

- Click the *Enabled* checkbox. If enabled, then Talk2M remote access will only be possible at the high state of the digital input 1. Only if the *Key Switch* has been enabled.

DI config wizard

Digital Input 1 (KEY) configuration

Digital Input 1 (KEY)

Remote access control  Enabled

Remote access will be allowed on DI1 HIGH state

SMS notification  Enabled

SMS notification disabled for DI1

Email notification  Enabled

Email notification disabled for DI1

Cancel < Previous Next >

Fig. 22 DI Wizard Remote Access Key Configuration

## 7.2 DI Alarm Notification

The following options are valid for *DI1* and *DI2*. For both digital inputs you can setup email or SMS text message notification.

The *DI Config Wizard*: Select the option(s) by simply checking the *Enable* checkbox.

- The *SMS notifications*; enter the phone number, and body of the message accordingly; then a notification will be sent when the *Digital Input* switch on a high state.
- The *Email notification* enter the recipient, subject, and body of the message; then a notification will be sent when the *Digital Input* switch on a high state

DI config wizard

Digital Input (KEY) configuration

SMS notification  Enabled

Phone number(s): 04470123456789  
Maximum 40 characters, phone numbers separated by ',' (Example: 004470123456789,00140012345678)

SMS body: DI of eWON has been activated  
Maximum 134 characters (Example: DI1 of eWON has been activated)

An SMS will be sent on DI1 HIGH state. The SMS will be sent via Talk2M Relay and charged to your talk2M account

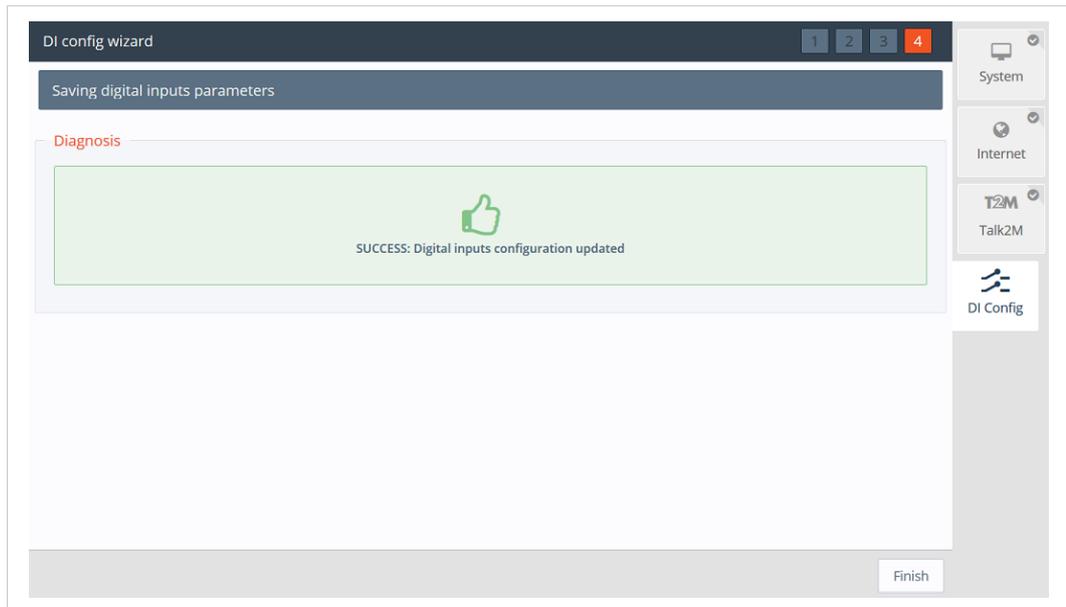

Email notification  Enabled

Email recipient(s): test@hms.se  
Maximum 80 characters (Example: sales@hms-networks.com, support@hms-networks.com)

Cancel < Previous Next >

Fig. 23 DI Wizard Notification Key Configuration

Click *Next* to test and apply the *Digital Input* connection settings.

**Fig. 24** DI Wizard Remote Key Configuration Validation

If the *Digital Input* is on a high state at boot time; then a notification is sent out once the Cosy 131 is connected to Talk2M and a prefix “(BOOT)” is added to your messages

SMS and email notifications *even on a Cosy 131 WiFi and ethernet*, are sent via T2M relays, but it does force the Cosy 131 to have a T2M connectivity and charges will apply for every SMS sent.

## 8 Wan fallback

The *WAN fallback*, is an alternative option that allows the Ewon Cosy 131 to switch between networks automatically when the primary WAN network interface fails.

To configure the WAN fallback feature on the Cosy 131, the Internet wizard needs to be re-launched, then configure the Internet wizard once again. If the Cosy 131 detects a second WAN interface; it will ask you if you want to configure a *WAN Fallback* interface.

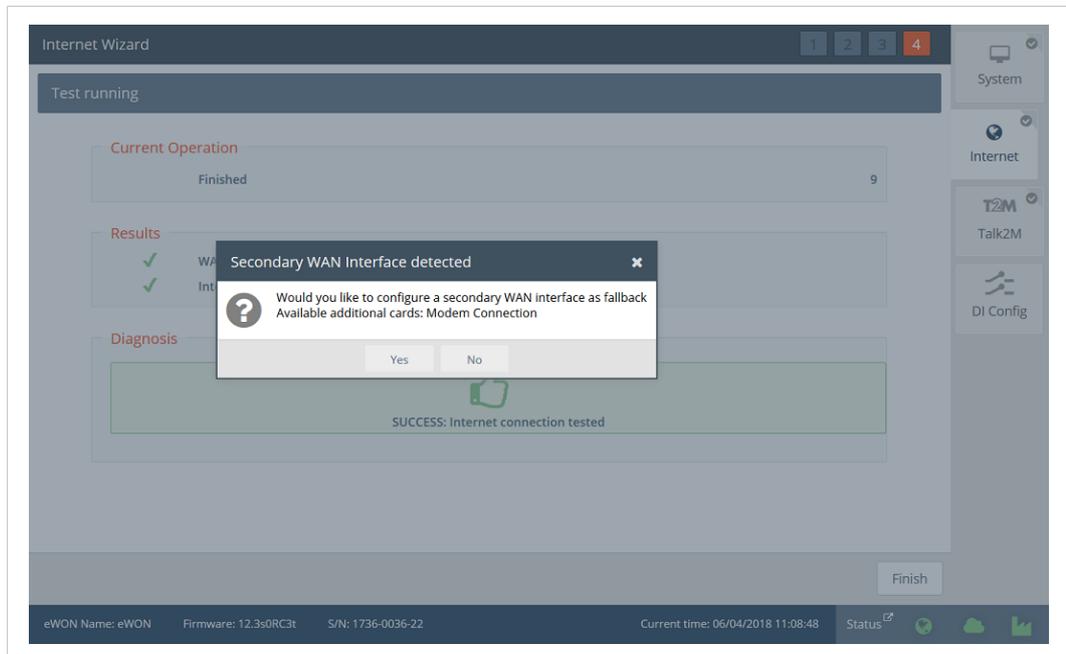

Fig. 25 Internet Wizard WAN Fallback

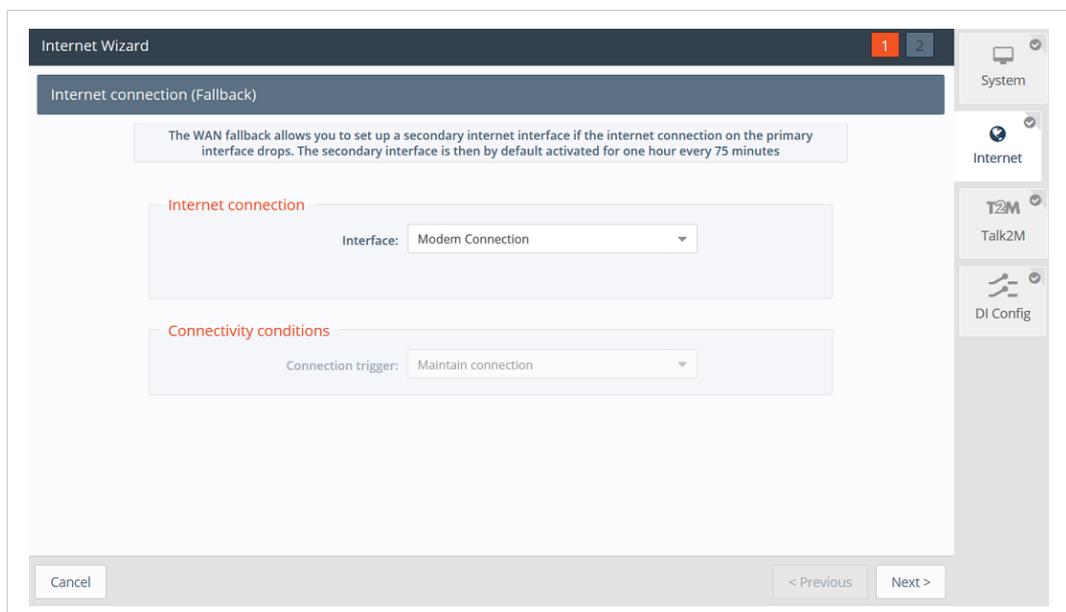

Fig. 26 Internet Wizard WAN Fallback Setup

In the case the primary WAN interface fails, the Cosy 131 will shift to the secondary WAN interface 3 minutes after the connection problem appears, then it will stay on the secondary WAN interface *the fallback interface* for 1 hour. After this hour the Cosy 131 will try to connect back the primary WAN interface and if it does not succeed the Cosy 131 will go back to the

secondary WAN interface. For further information about Wan Fallback refer to [Related Documents, p. 3](#)

Click *Next* to move forward to the next screen.

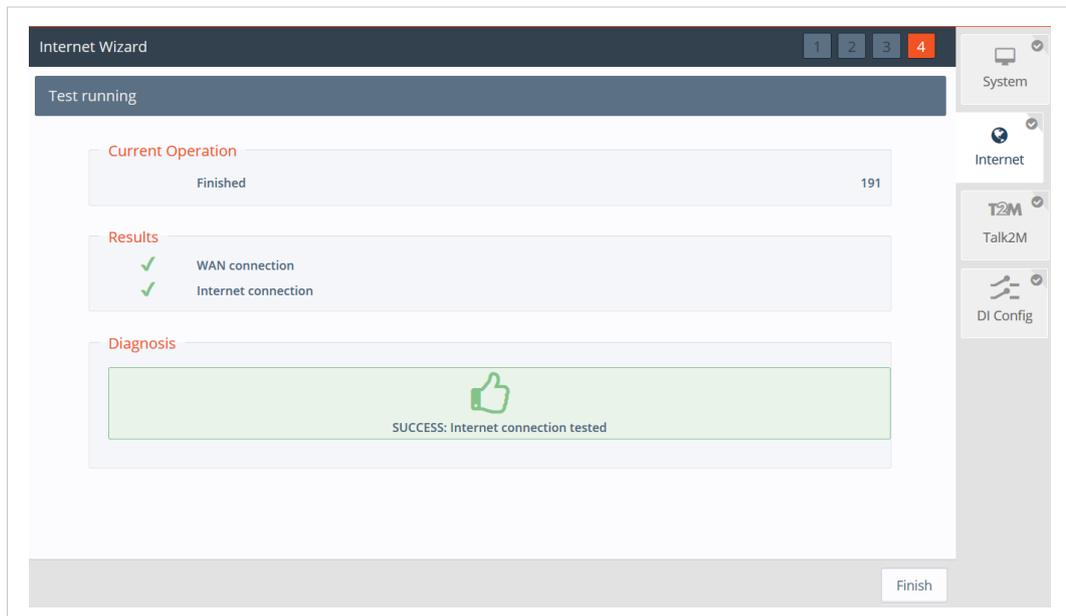

Fig. 27

Now, the *WAN fallback* network settings are successfully configured.

*WAN fallback* feature will appear only by clicking on the Internet Wizard. If the Quick Launch Wizard is performed; the Internet Wizard will not offer the *WAN fallback* option

## 9 Diagnostic and Setup

On the Cosy 131, the main configuration setup are done through the Wizard nevertheless, on the left hand side menu, there are 2 core options *Diagnostic* and *Setup*.

The *Diagnostic* menu, records significant system events on the Cosy 131 that can be used in case of troubleshooting; such a logs are given one of three severity levels: *Error*, *Warning* or *Trace* and color coded correspondingly

The *Setup* menu on the other hand offers an alternative approach to changes parameters such as *Language*, *Ethernet IP*, and/ or reboot the Cosy 131

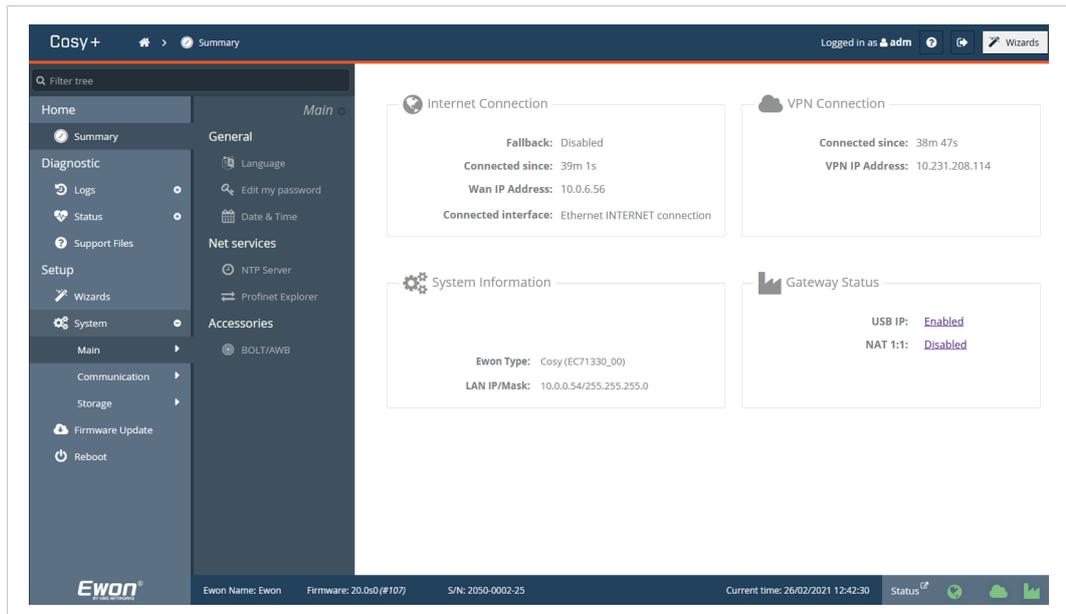

Fig. 28 Diagnostic and Setup menu
